PROFESSIONAL SUMMARY

Java full-stack engineer with 5 years' experience building and running business-automation software for ISPs across Africa, covering backend services, databases, Vue front ends and CI/CD deployment. AWS Certified Cloud Practitioner and Oracle Certified Associate (Java SE 8), and CompTIA Security+. Moving into DevSecOps and cloud infrastructure, bringing production engineering experience and a security-first approach to secure, automated delivery.

CORE SKILLS

- **Languages:** Java (primary), TypeScript/JavaScript, SQL, Bash; working knowledge of Python and Rust
- **Backend:** JAX-RS, Hibernate, Tomcat, REST APIs, MySQL, HikariCP
- **Frontend:** Vue 3, HTML5, CSS3/SCSS
- **DevOps and cloud:** CI/CD pipelines, Git (GitHub/GitLab), Linux, AWS, Docker, Terraform
- **Security:** secure coding, access management, vulnerability assessment, Trivy, OWASP Dependency-Check

CERTIFICATIONS

- CompTIA Security+ (SY0-801)
- AWS Certified Cloud Practitioner
- Oracle Certified Associate, Java SE 8 Programmer

WORK EXPERIENCE

SOLIDITECH (PTY) LTD — **Durban / Cape Town, South Africa**
Software Engineer — **January 2023 to Present**
Junior Software Engineer — **January 2021 to 2023**

Full-stack engineer *on a business-automation platform for ISPs across Africa (fibre service provisioning and prepaid top-up processing)*

- Build and maintain Java backend services (JAX-RS, Hibernate, MySQL on Tomcat) and Vue 3/TypeScript front ends used by multiple ISPs internationally.
- Closed application security gaps in production, including cross-account access flaws (IDOR), SQL injection and error messages that leaked internal details.
- Diagnosed and fixed load-driven outages in an API provisioning integration through log analysis, caching, background fetching and removal of redundant calls.
- Led root-cause analysis and fixes for production workflow, billing and data-integrity problems, including a repair plan for incorrect data and index tuning that sped up slow queries.
- Strengthened existing API rate-limiting configurations to reduce abuse or overload.
- Deliver customer-specific features end to end: requirements, implementation, testing, deployment and production support.

PROJECTS

- DevSecOps pipeline: Dockerised Java app deployed to AWS with Terraform and a GitHub Actions pipeline running Trivy, OWASP Dependency-Check and Gitleaks scans.
- Personal portfolio site (www.kimarennaidoo.com): built with HTML5, CSS3/SCSS and JavaScript, hosted on Netlify.
- Source code and further projects on GitHub: github.com/KimarenNaidoo

EDUCATION

BSc Computer Science and Information Technology, University of KwaZulu-Natal — **2018 to 2020**
Dean's Commendation, Semesters 1 and 2, 2020
